

Shark Tooth Data Activity

Paleontologists use qualitative and quantitative data to classify and analyze fossils. In the previous activity, you used data to sort shark teeth into different categories. We are now going to record data in a spreadsheet to emulate how information is stored in a database. Use the teeth from your fossil kits to fill out the table below.

| Specimen # | Scientific Name | Color | Tooth Height | Tooth Width | |
|------------|-----------------|-------|--------------|-------------|--|
| 1 | | | | | |
| 2 | | | | | |
| 3 | | | | | |
| 4 | | | | | |
| 5 | | | | | |
| 6 | | | | | |
| 7 | | | | | |
| 8 | | | | | |
| 9 | | | | | |
| 10 | | | | | |
| 11 | | | | | |
| 12 | | | | | |
| 13 | | | | | |
| 14 | | | | | |
| 15 | | | | | |
| 16 | | | | | |
